Dr. Harding Bliss
Chemical Engineering Dept.
Yale University
New Haven, Conn.

Dear Dr. Bliss:

Enclosed are the negative reviews I have received with regard to ms #6593 on nucleate boiling. You will note that they are unanimous in their opinion that I am an incompetent liar. Now, perhaps I am incompetent, but I am no liar. As to the claim that my work is "obviously incorrect", I remind you that, for many years, the French Academy of Science claimed that Darwin's work was "evidently false". Perhaps the true translation of both these phrases is "impolitic".

The review score on my ms now stands at:

Very Favorable:	1
Indifferent:	1
Opposed:	4

I am relieved that I am not with the majority, since I agree with Ibsen that "The majority is always wrong."

You will notice that Miller sent a copy of his letter to Kezios whom I believe is the editor of one of the ASME Journals and who is not connected with the AIChE. These "defenders of the literature" are very active!! They seem to pop up wherever the truth rears its ugly head.

Sincerely yours,

Eugene F. Adiutori
